ProofLedger | Errors identified

Independent review of the supplied fictional Okafor–Lindqvist 2025 packet. Reported v3 values are not corrected returns; issues remain for CPA review. Independent controls supplement, rather than trust, engine diagnostics.

CRITICAL 01 · California payment assigned to wrong tax year

Evidence: D68, FTB agency record, F540NR.72

Observed: Four payments totaling $14,000 are counted in 2025; the September 15, 2025 $3,500 payment was specifically designated 2024 and held by FTB as a 2024 credit. Other three 2025-designated payments total $10,500.

Detection / action: Independently reconcile tax year, date, and amount against both source payments and FTB ledger. Potential $3,500 excess credit/refund all else equal; confirm and recompute.

CRITICAL 02 · $12,400 card receipts apparently double counted

Evidence: D14, D15, D17, D21; SchC.1

Observed: Book revenue is $151,300. D15 documents that Atlas paid $41,200 including $12,400 by Paywell, already included in sales. Engine reports $163,700 after adding Paywell again.

Detection / action: Match 1099-K settlement cash to already booked payer receipts before adding income. Recompute Schedule C, SE tax, QBI, federal and state effects.

CRITICAL 03 · Dependent identity contradiction

Evidence: Organizer, D06, D71

Observed: Theo’s organizer SSN ends 3309, but the social security card and prior-year filed return end 3390. D71 is not among v3 engine-used documents.

Detection / action: Cross-check authoritative identity and prior-year information; block filing until verified. Do not automatically overwrite the organizer.

CRITICAL 04 · California work-location allocation

Evidence: Household residency, D09, D73, SchCA540NR.1.E

Observed: Midyear move to Texas on July 15 confirmed by paystub; employer payroll continued to label California through September. Engine shows $218,400 of California wages, apparently including all wages.

Detection / action: Obtain workday/payroll allocation and independently substantiate California sourcing. Exact corrected wages cannot be derived from this packet.

WARNING 05 · Brokerage proceeds mismatch

Evidence: D31; BROKER_SUMMARY_DETAIL_MISMATCH

Observed: Meridian reported proceeds $71,965 versus extracted transaction lots totaling $71,715 — $250 not reconciled.

Detection / action: Sum authoritative corrected statement lots and investigate omissions before sign-off.

WARNING 06 · Crypto transfer has missing cost basis

Evidence: D34, D35; DIGITAL_ASSET_BASIS_MISSING

Observed: Coinhaven lot C6 arrived from an external wallet; the engine assumes zero basis and a transfer-in acquisition date.

Detection / action: Obtain original acquisition history. True gain and holding-period tax effects unknown.

WARNING 07 · California AMT not calculated

Evidence: D12; CA_AMT_NOT_COMPUTED

Observed: ISO exercise affects federal AMT; packet explicitly says California AMT not computed.

Detection / action: CPA review Schedule P applicability; cannot infer true liability without computation.

WARNING 08 · Outside filing not completed

Evidence: D27; FORM_1099_FILING

Observed: Contractor ACH payments of $4,800 and $2,600; client has not issued Forms 1099-NEC.

Detection / action: Flag separate filing and ownership, even though outside the 1040 engagement scope.

WARNING 09 · Low-confidence charitable evidence

Evidence: D64, ev-1049

Observed: Handwritten donation receipt has extraction confidence of 0.41.

Detection / action: Human verify document amount and eligibility; record field-level check.

WARNING 10 · Sales questionnaire contradiction

Evidence: qa-14; D28, D31, D34, D74

Observed: Client answered that no securities were sold, but broker/crypto records show numerous sales, including 260 direct-indexing lots.

Detection / action: Ask client and preserve both answer and independent evidence; document resolution.

Limit: 2025 engine v3 is the latest computed snapshot. The packet does not provide a callable recomputation engine. Tax effects are not final unless the supplied precomputed scenario explicitly includes them. High extraction confidence is not independent verification.
